

Unifying your security ecosystem.

Aggregate what you already run. Validate what it actually covers. Unify it into one result — across your people, your assets and 31 compliance frameworks.

Most organisations already **have, run and support** several security and compliance systems — each holding a partial, differently-shaped version of the truth, usually with no context passing between them. 786 Cyber **aggregates** what you already run, **validates** what it actually covers, and **unifies** it into one result. You do not have to replace anything to start.

Three pillars. Three continuous motions. One version of the truth.

Aggregate what you already run, validate what it actually covers, and unify it into one result — across your people, your assets and 31 compliance frameworks.

31

frameworks + threat layer

1,999

controls catalogued

1,936

control-level cross-mappings

You keep what you already have

Keep the scanner you like. Keep the pen test provider you trust. Keep your accredited scanning vendor. Bring the output in and it becomes evidence sitting alongside everything else, against the controls it supports. **We sit above your tools, not against them** — the tools you already pay for start earning their keep.

WHAT YOU GET

- **Connect in minutes** — Microsoft 365 and Google Workspace directory sync, AWS, your domains
- **1,999 controls** catalogued, with 1,381 sub-controls beneath them
- **AI-guided assessment** and policies written for your organisation
- **Vulnerability prioritisation** by real exploitability (EPSS, CISA KEV) — not raw severity
- **31 compliance frameworks** plus a threat layer (MITRE ATT&CK, Unified Kill Chain)
- **1,936 control-level cross-mappings** — 181 audit-proof, from a published crosswalk
- **Evidence vault** with reuse tracked across every framework you run
- **Cloud posture, web app scanning** and external threat intelligence, all included

Three pillars, twelve capabilities, one version of the truth

Environment & People — who has access to what, and what you actually run. **Policy & Process** — how you operate securely and how you prove it. **Technology & Threats** — what you run and what threatens it. Alongside them, **Testing & Validation**: active reconnaissance against your own estate, admin-gated, consent-based, and deliberately excluded from your automatic posture score.

SIMPLE, PUBLISHED PRICING

- Comply £149/mo · Essentials £249 · Growth £549
- Business £1,199 · Enterprise from £2,500
- 20% saving on annual billing
- The whole catalogue is mappable on every plan, free
- Plans gate how many frameworks you actively run — never

START · PROVE · COMMIT

- **Start** — 14 days free, no card. Removes the risk.
- **Prove** — a single month at a time, cancel anytime. Removes the commitment.
- **Commit** — annual, and save 20%. Removes the cost, and the annual procurement cycle.
- UK/EU data residency by default; Dubai available for enterprise
